SmartBUSINESS
saving makes sense

The **SmartBUSINESS** Incentive Program is focused on encouraging commercial customers to reduce their demand in certain areas by 20 percent or more. Customers may choose any measure that accomplishes the demand reduction requirement. Demand is an industry term that defines the rate at which energy is consumed and is measured in kilowatts (kW). Consumption is the rate at which energy is consumed over time and is measured in kilowatt hours (kWh). A common measure that businesses choose to implement is an LED lighting retrofit, exchanging incandescent or high bay metal halide lights for LEDs. For example, the reduction in demand is shown by taking out a 60-watt (W) bulb and replacing with a 20 W bulb, reducing the amount of energy needed to power the light by more than 20 percent. Rebates for this program fall between 10 and 20 percent of the total project cost with a cap of \$30,000 per customer per fiscal year.

To be eligible you must:

- Be an owner of a non-residential structure within the BTU service territory.
- Be billed on a commercial or industrial rate.
- Provide proof that your project will meet the minimum requirement of a 20 percent reduction in demand.
- Provide before and after pictures of the project.
- Provide all invoices or receipts for the project.

CONSERVATION TIPS

Energy Conservation Tip:

Use an electronic power strip! By plugging electronic devices into a power strip and turning it off when not in use, you help reduce phantom loads.

Water Conservation Tip:

Using either low-flow shower heads or adjustable flow-reducer devices on your shower heads can help reduce the water flow by at least 25%!
