HOT WEATHER AC Tips

The Brazos Valley is experiencing one of the hottest and driest summers on record. Much of the summer has seen high temperatures at or above 100°F. Extreme heat for an extended period can lead to increased energy consumption due to constant use of air conditioners.

When outside ambient temperatures reach 100°F or higher, air conditioners become less effective and have to work harder to cool homes and businesses. The outside condenser unit has more difficulty expelling heat in extreme temperatures. If the heat is combined with increased humidity, the unit can face additional challenges. Air conditioners help cool the air by removing excess humidity. If the air conditioner is having trouble cooling to the desired setting, you may want to call a serviceman. Keep in mind that the unit may not be able to keep up with cooling the space thirty degrees or more below the outside temperature.

What can you do to lessen the impact to your utility bill?

Set the thermostat as high as comfortably possible while you are home and higher while you are away. The smaller the difference between the outdoor temperature and your desired indoor temperature, the less your air conditioner has to run.

Avoid doing heat and humidity producing chores during the heat of the day. Save running laundry machines and dishwashers for the early morning or late evening hours. These appliances add heat and humidity to your home for your air conditioner to have to work against to cool to the desired temperature.

Close blinds and drapes to keep the sun's radiant heat out.

Use weather-stripping or caulk to seal around windows and doors to prevent air leaks.

Make sure all lightbulbs are LEDs. They use less energy and emit less heat than incandescent or CFL bulbs.

Visit our website to learn more about our SmartHOME Program that incentivizes customers for installing attic or exterior wall insulation, installing EnergyStar® windows or installing solar screens on the outside of windows.

CONSERVATION TIPS

Energy Conservation Tip:

Keep the vents free from dust by regularly cleaning them, and set a schedule to change the return air filter(s) as recommended by the manufacturer.

Water Conservation Tip:

Sweep your driveway, patio, and sidewalk to remove dirt rather than hosing them off.
